After connecting to the remote host I get:

```
/usr/local/bin/regina: REXX-Regina_3.9.4(MT) 5.00 25 Oct 2021 (64 bit)
```

and can not run any commands. After reading up on Rexx-Regina I assume the verbosity is set to 0.

Looking through some cheatsheets, manuals and asking ChatGPT I eventually tried this order of commands:

```
var=linein('flag.txt')
say var
ctrl+d
```

I use `ctrl+d` at the end, which signals the end of an input or EOF marker and tells regina to process the data it's been instructed. It will then process the commands and end the session.

```
/usr/local/bin/regina: REXX-Regina_3.9.4(MT) 5.00 25 Oct 2021 (64 bit)
var=linein('flag.txt')
say var
flag{2459b9ae7c704979948318cd2f47dfd6}
Connection to challenge.nahamcon.com closed.
